

Scenturion® is a clear, flexible, micro-coating fortified with pure nano silver formulated to kill 99.9 % of the microorganisms which cause odor in footwear, clothing, athletic gear, military and law enforcement body armor, home furnishings, pet bedding and crates, carpeting, athletic and exercise mats, auto interiors, and just about any other items that need disinfecting.

About 90% of clothing and footwear odor is caused by bacteria delivered by our sweat. The remaining odor is caused by **smelly fatty acids, urea, ammonia, and steroids**. Scenturion® is formulated to attach to the volatile molecules of these substances making them heavy and permanently undetectable! Scenturion® will also capture odor from cigarette smoke, urine, cooking odors, and most other residual odors!

Because it eliminates all the causes of odor, Scenturion® is formulated without any added fragrance. A fragrance would mask odor and compromise our ability to detect “absolutely no odor”. This is the fundamental difference between Scenturion® and other sprays. If you can smell even a slight odor, it’s a sign that the item needs to be treated again to ensure that 100% of the “sweat contact surface” of the item has been treated.

Often, when sprays achieve the high degree of effectiveness of Scenturion®, they use ingredients that are either toxic, caustic, carcinogenic, flammable, or known allergens. Not Scenturion®. Scenturion® is hypoallergenic, non-toxic, and environmentally friendly and is designed to treat washable and non-washable items. You can treat a toddlers’ shoes with Scenturion® – it’s completely safe!

Apply Scenturion® until the item has absolutely no odor. Just like wet paint - allow it to dry before wearing. For example, if you wear shoes before they are dry, the socks will wick the treatment off the shoes. You can treat an item when it’s wet or dry. What’s important is to let the treated item dry BEFORE wearing it. Otherwise, you may remove some of the treatment by contact. When it is first applied, the odor will go away almost immediately. Sometimes, a second application is required for items that have been well worn.

The key to Scenturion®’s effectiveness is its particle size and concentration. The silver particle size is so small that you can line up 1,000 particles across the diameter of a single human hair! These nanoparticles attach to the individual fibers of the fabric or surface of the leather that lines the item. Cotton Incorporated subjected treated fabric to 30 machine washings and then tested the material. After 30 machine cycles, the fabric had enough residual nanosilver to provide full antimicrobial protection.

The real genius of Scenturion® is that every time a treated item is worn and the plume of sweat reaches Scenturion®’s nanosilver – it reactivates the silver – and it produces silver ions that wipe out all the microbes on the item. The FDA has recently approved silver as a wound dressing coating. Dressings treated with silver prevent the microbes from colonizing the dressing. When you treat personal items with Scenturion®, you are preventing microbes from colonizing your belongings.

Once an item is properly treated with Scenturion®, its effectiveness should last for weeks – even months. Simply retreat the item when the odor returns.

SAFETY PROFILE: No Toxic Ingredients, No Fragrance, No Flammable Ingredients, No Caustic or Carcinogenic Ingredients, No Volatile Organic Compounds (VOCs), No Chlorofluorocarbons (CFCs), No Potentially Irritating Ingredients (Hypoallergenic), Safe for the Environment and Recyclable.

Deodorize and Sanitize Safely with Scenturion®
Pure and Simple, No Odor.... No Germs™.

- ✓ Kills Bacteria and Fungus On Contact
- ✓ Binds to Urea, Ammonia, Steroids, & Smelly Fatty Acids making them undetectable
- ✓ Reactivates While Treated Items are Worn (*reactivated by perspiration*)
- ✓ Treatment Lasts for Weeks
- ✓ Use on washable & non-washable items (*proven effective after 30 machine washes*)
- ✓ Completely Safe for Children*:
 - No toxic ingredients & recyclable
 - No Fragrance (doesn't mask odor)
 - No carcinogenic ingredients
 - No caustic ingredients
 - No flammable ingredients
 - No volatile organic compounds (VOCs), chlorofluorocarbons (CFCs) or ozone depleting materials.

*People who suffer from allergies or multiple chemical sensitivity (MCS) are sure to benefit from using Scenturion® because it does not emit any harmful chemicals often found in deodorizers that mask odor with potentially harmful fragrances (essential oils).

***The More You Sweat,
The More It Works®***
